

New titles in Eurocodes Guides

Designers' Guide to Eurocode 1: Wind Actions, Second edition

John Owen

This series of *Designers' Guides to the Eurocodes* provides comprehensive guidance in the form of design aids, indications for the most convenient design procedures and worked examples. The books also include background information to aid the designer in understanding the reasoning behind and the objectives of the codes. All of the individual guides work in conjunction with the *Designers' Guide to EN 1990: Basis of Structural Design*.

Wind loading is an essential element of the design of all structures. This new edition provides users with guidance on the interpretation of the code and on the changes that were introduced by the associated National Annexes.

It includes embedded examples at key stages of the text to illustrate how particular equations or clauses are applied. Collated examples are included as appendices and illustrate the application of the Eurocode to typical example building structures (low rise, medium rise, and cladding loads etc.).
